

## Extracting Source from a NetLinx Processor

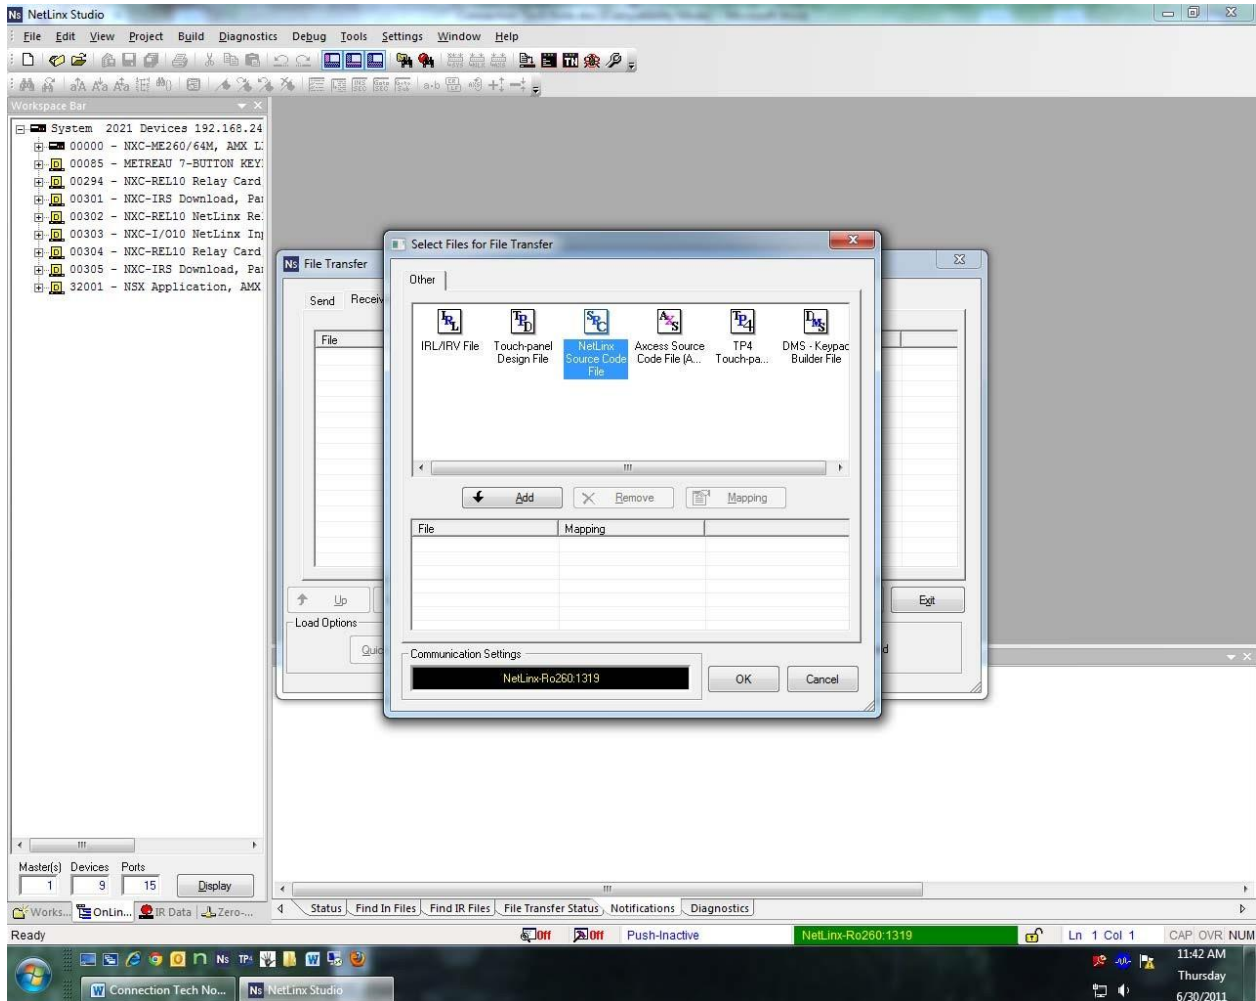

As a preface, it is important to understand that the Source file “SRC” is not the code in the processor. It is what was uploaded in addition to the code when the programmer originally set up the system. The programmer can choose not to upload source. Additionally modules do not come out of the processor in the SRC file, so if modules were used, they will need to be located and put in the same folder with the extracted source in order to be able to compile and reload the code at a later date. In other words, don’t expect the SRC you pull off to necessarily just load back to a replacement processor without other items – it is not necessarily the entirety of the code on the processor.

The following assumes you already have connection to the processor. If you do not, see [Tech Note 982](#).

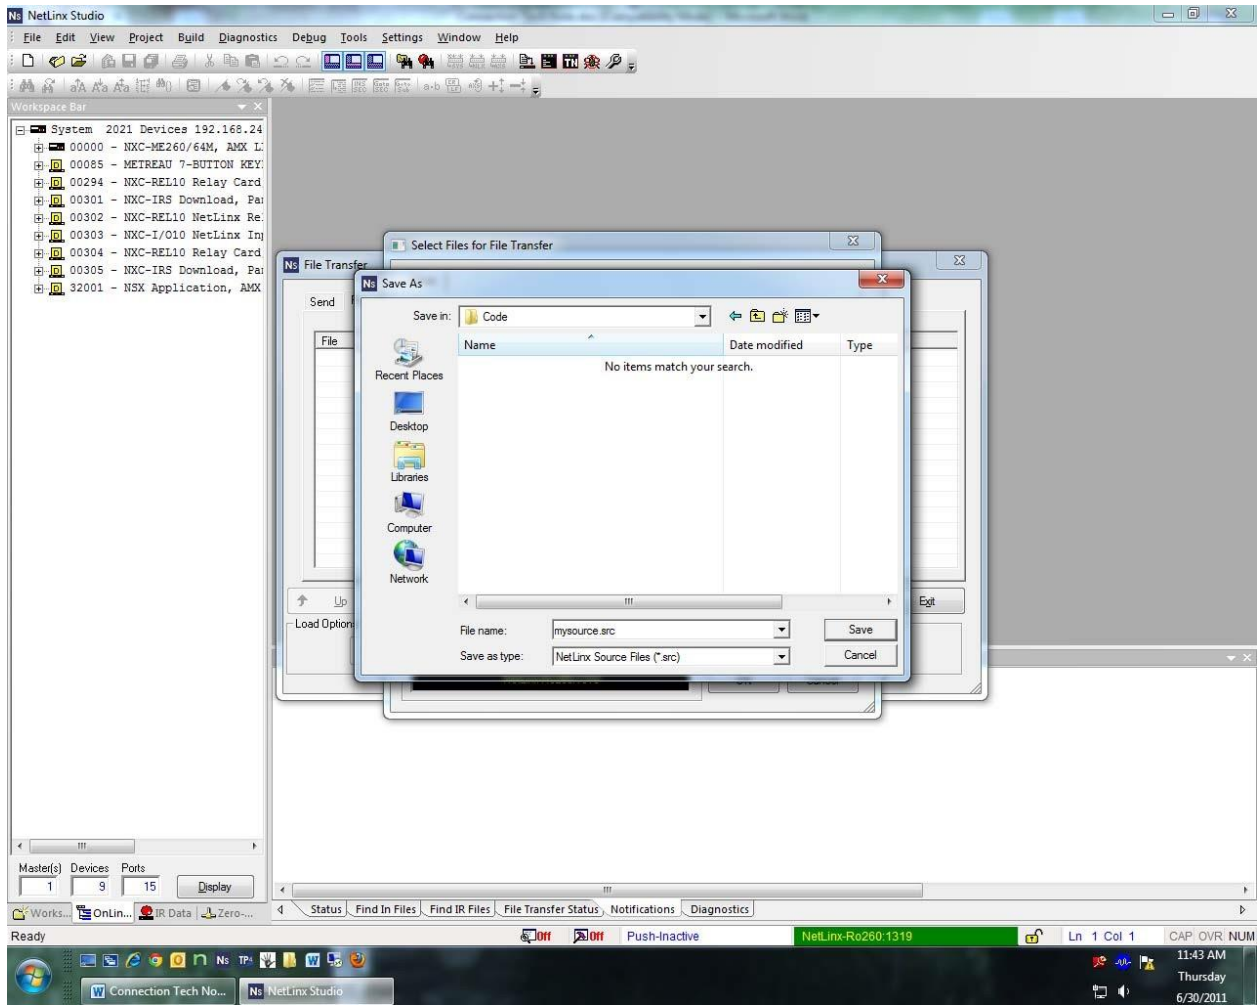

1. NetLinx Studio should already be open and configured to communicate as described in the prior mentioned tech note.
2. Select “Tools>FileTransfer” (see illustration)

3. In the “File Transfer” dialog, Click the “Receive” Tab
4. Select “Netlinx Source Code File” (See Illustration)

5. Select “Add”, name your file, and choose where to save it(see illustration)

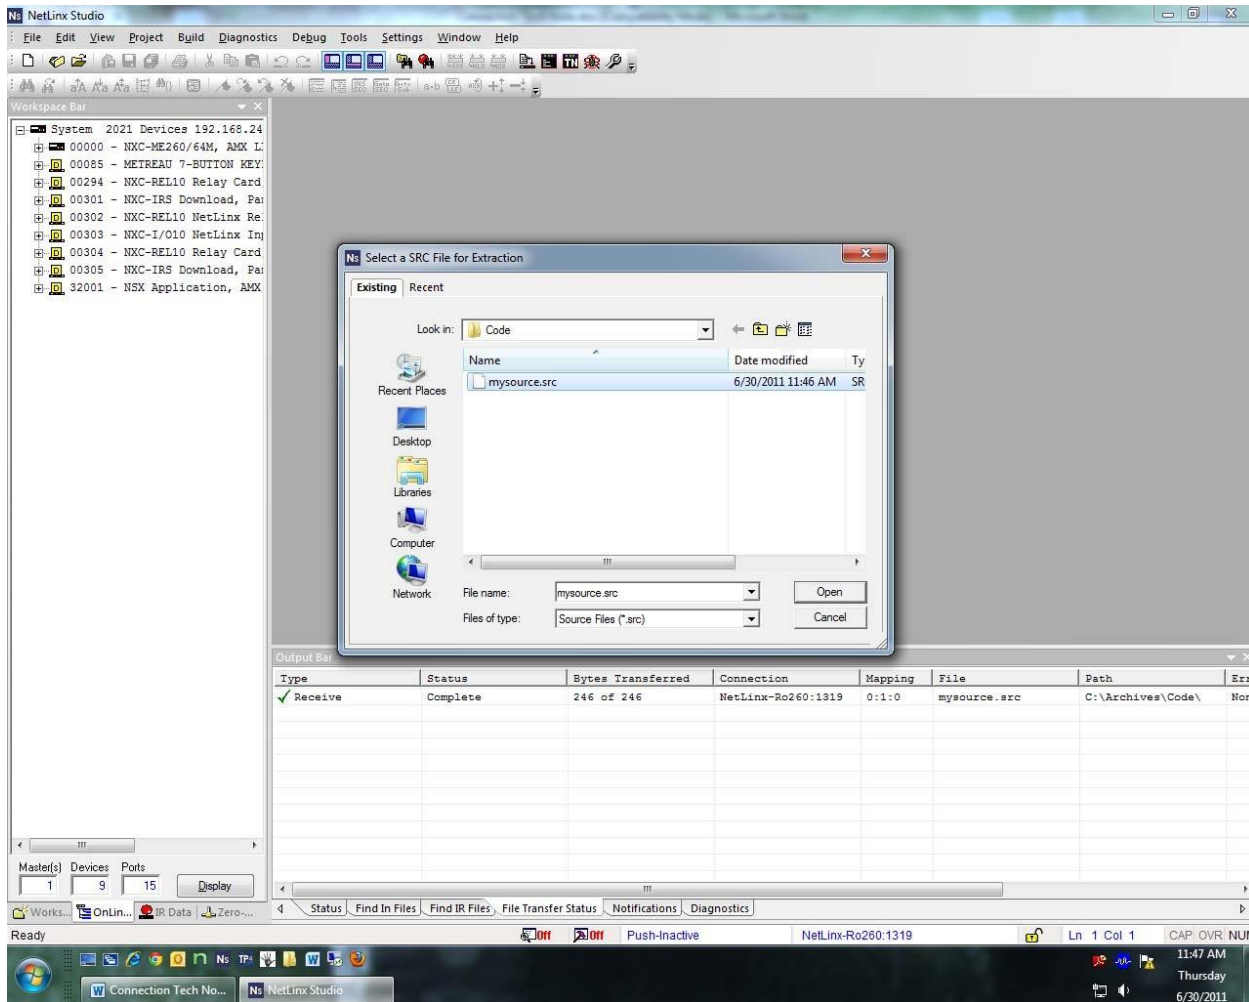

6. Click “Save”
7. In the “Enter device mapping” dialog, set (see illustration)
  - a. Device number 0
  - b. Port number 1
  - c. System number 0

8. Click “ok”, “ok”, Click “Receive”, which saves the source to your computer.
9. Now go to “Tools>File Extraction>Extract from SRC” (see Illustration)

Browse to the folder containing your SRC file, select it, and hit “Open” (See Illustration)

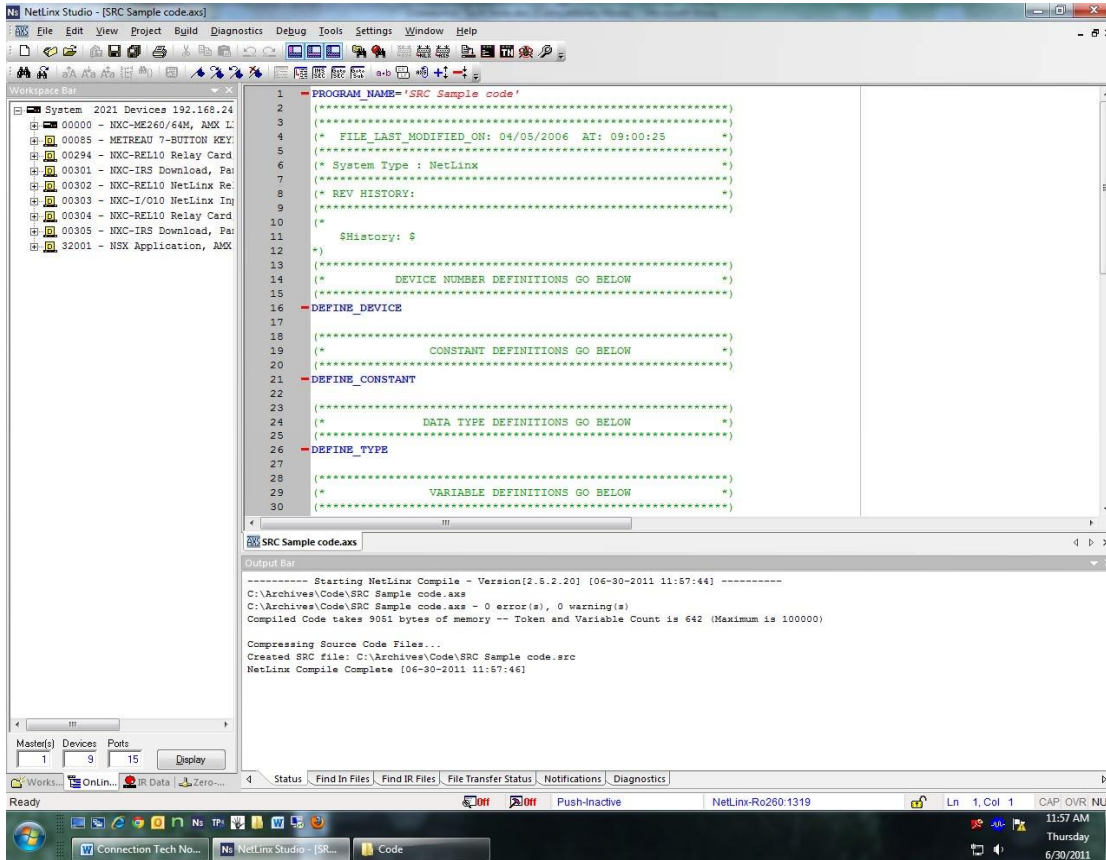

|| The next dialog boxes are just for clicking ok to extract the files. Note the “Extract To” window. This is where your files will be located when extraction is complete (See Illustration)

12. Browse to the folder where the files were extracted and locate the AXS, double click it loading it in studio (See Illustration)

## About HARMAN Professional Solutions

HARMAN Professional Solutions is the world's largest professional audio, video, lighting, and control products and systems company. Our brands comprise AKG Acoustics®, AMX®, BSS Audio®, Crown International®, dbx Professional®, DigiTech®, JBL Professional®, Lexicon Pro®, Martin®, Soundcraft® and Studer®. These best-in-class products are designed, manufactured and delivered to a variety of customers in markets including tour, cinema and retail as well as corporate, government, education, large venue and hospitality. For scalable, high-impact communication and entertainment systems, HARMAN Professional Solutions is your single point of contact. [www.harmanpro.com](http://www.harmanpro.com)
