

## Chrome Based Browser Issues With Ui Mixers

### Ui pages stick and are very jumpy using a Chrome based web browser (Chrome, Opera, Edge).

The latest version of any Chrome based browser is very unstable, pages stick, then jump. Scrolling will continue after the user has stopped scrolling.

This has been noted on all Chrome based browser. We recommend the use of Firefox web browser instead.

We have found that any Chrome based browser (Google Chrome, Opera, Edge, and more), is having issues handling HTML5 animations. The Ui series of mixers uses HTML5 animations for control of the mixer. If you are having these issues, use a different browser. Mozilla based browsers (Firefox) seem to handle the HTML5 animations smoothly and without issues.

#### About HARMAN Professional Solutions

HARMAN Professional Solutions is the world's largest professional audio, video, lighting, and control products and systems company. Our brands comprise AKG Acoustics®, AMX®, BSS Audio®, Crown International®, dbx Professional®, DigiTech®, JBL Professional®, Lexicon Pro®, Martin®, and Soundcraft®. These best-in-class products are designed, manufactured and delivered to a variety of customers in markets including tour, cinema and retail as well as corporate, government, education, large venue and hospitality. For scalable, high-impact communication and entertainment systems, HARMAN Professional Solutions is your single point of contact. [www.harman.com](http://www.harman.com)
