

Soundcraft provide users with the option to fit various IO cards to consoles, local rack and stageboxes. This guide will step you through the process of identifying option card slots, card fitting and configuration.

I. Location of option card slots

Refer to the pictures below to identify the available D21m option card slots (highlighted orange) on your product

Vi Local Rack (up to 12 single-width slots)

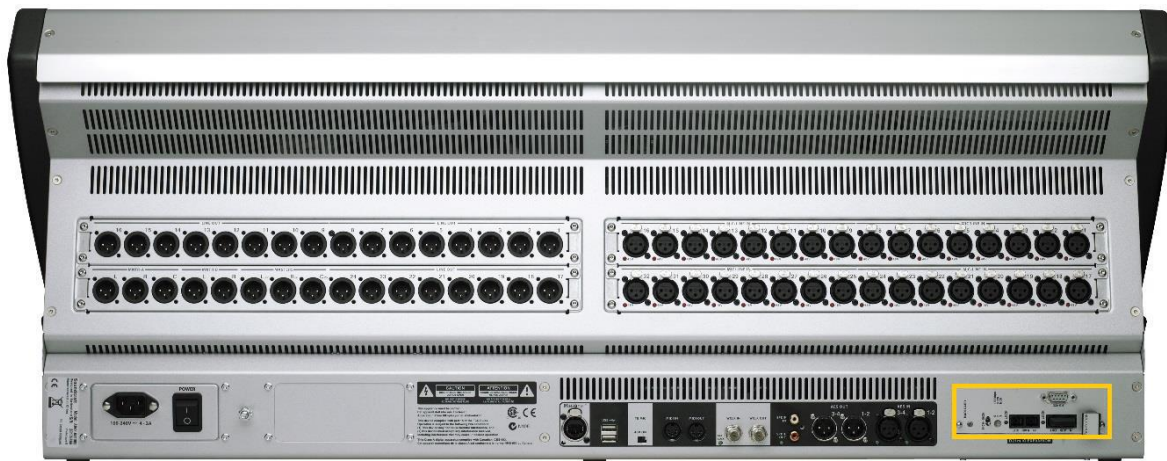

Vi2000/3000 (4 single-width slots)

2. Fitting instructions

OBSERVE ESD PRECAUTIONS

Option card IO must be configured so as not to exceed the maximum IO of your system.

For details on how to configure your D21m card DIP switches, please refer to the user guide, available here:
<http://www.soundcraft.com/en-US/products/vi-option-cards>

Ensure all power is removed from the unit in question. Remove cover plate(s). Fit card and secure with supplied fixings. Turn unit on and when booted, press the recessed RECONFIG switch* to clear any indicated card errors. Your new IO is now ready to be patched to/from in your Vi system.

*On ViI the RECONFIG button is located under the <MENU><SYSTEM><LOCAL IO> tab in the main console GUI.
