Line Level Out from Amplifier

21-Feb-22

Question:

Can I connect the output of my amplifier to a line level input of a power speaker/sub?

Answer:

Not directly, doing so would damage the input of the device the amplifier is feeding. Some amplifier models have a loop through jack that allows you to send the line level input signal to another device, but amplifiers without this feature would need a special transformer that could take the high power output of the amp and step it down to line level. This would compromise quality. A better and possibly cheaper way would be to split the line level signal feeding the amp and send that signal to your power speaker.

About HARMAN Professional Solutions

HARMAN Professional Solutions is the world's largest professional audio, video, lighting, and control products and systems company. Our brands comprise AKG Acoustics®, AMX®, BSS Audio®, Crown International®, dbx Professional®, DigiTech®, JBL Professional®, Lexicon Pro®, Martin®, and Soundcraft®. These best-in-class products are designed, manufactured and delivered to a variety of customers in markets including tour, cinema and retail as well as corporate, government, education, large venue and hospitality. For scalable, high-impact communication and entertainment systems, HARMAN Professional Solutions is your single point of contact. www.harman.com
