v1.0

Connecting the Ui24R to an iPad with an Ethernet Cable

1-Sep-22

Question:

Can I connect my iPad to the Ui24R Mixer with an Ethernet cable?

Answer:

Yes.

If your iPad has a Lightning port, you can use a Lightning to Ethernet + Power adapter (or Lightning to USB-3 Camera Adapter plus USB Ethernet Adapter).

You should plug your iPad's power cable into the adapter's power port.

If your iPad has a USB-C port, you can use USB-C to Ethernet Adapter, if it has a Thunderbolt port, you can use a Thunderbolt to Ethernet Adapter. With USB-C and Thunderbolt you will need powered adapter only if you want to charge your iPad while being connected to the UI Mixer.

Once the devices are connected, you can follow the setup guide of the Ui User Manual.

(SETTINGS > NETWORK CONFIG > LAN (page 112.))

The Ui User Manual can be downloaded here:
