Connecting a Stagebox to Two Consoles

19-Jan-23

Question:

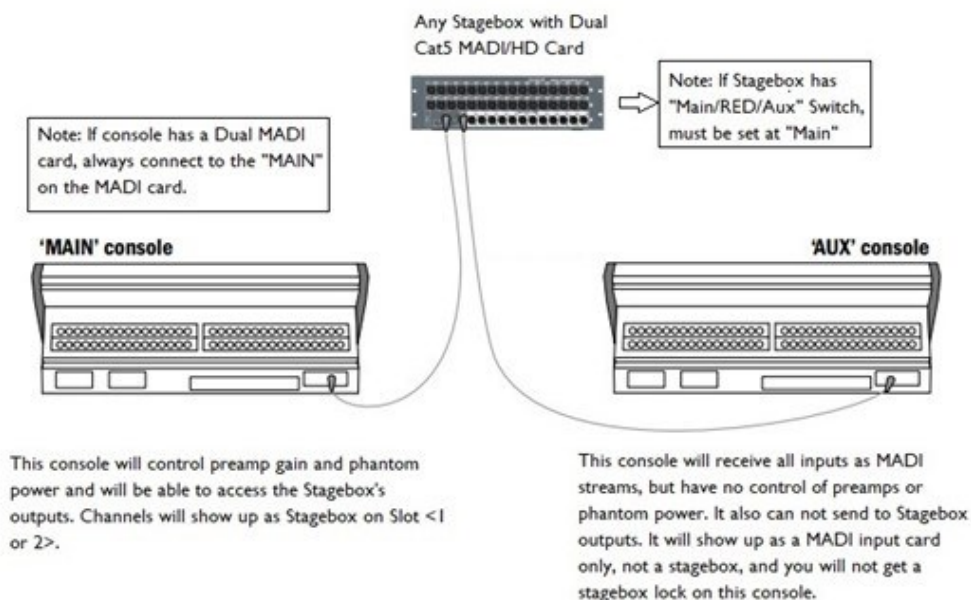

How do I connect 2 Soundcraft Consoles together using the same stagebox?

Answer:

One setup is as a single console connection using MAIN and AUX connection from Stagebox to console, the AUX being used as a redundant backup in case the MAIN fails.

The second usage is using the MAIN and AUX outs as a “split”. The MAIN is connected to one console and the AUX to another. The MAIN console has preamp & phantom power control (as preamps and phantom power are in Stagebox itself, as well as HI Pass filter on Vi stageboxes). The MAIN console will also have access to Stagebox outputs. The 2nd console will receive audio from all inputs on the AUX connector as a MADi stream. The 2nd console will not see a Stagebox lock and will just choose MADi inputs for their digital input source. That console will have digital trim (+10 to -10), but no access to outputs on Stagebox either.

STAGEBOX CONNECTING TO TWO CONSOLES

About HARMAN Professional Solutions

HARMAN Professional Solutions is the world's largest professional audio, video, lighting, and control products and systems company. Our brands comprise AKG Acoustics®, AMX®, BSS Audio®, Crown International®, dbx Professional®, JBL Professional®, Lexicon Pro®, Martin®, and Soundcraft®. These best-in-class products are designed, manufactured and delivered to a variety of customers in markets including tour, cinema and retail as well as corporate, government, education, large venue and hospitality. For scalable, high-impact communication and entertainment systems, HARMAN Professional Solutions is your single point of contact. www.harman.com
