Accuracy of the Real Time Clock in a BSS Soundweb London Device

7-Apr-23

Question

How accurate is the real time clock in a Soundweb London device?

Answer

The real time clock accuracy is specified at +/- 1 second per day. This applies to all models that comprise a real time clock: BLU-100 series, BLU-800 series, BLU-300 series, BLU-80, BLU-32, BLU-16, BLU-50 and BLU-GPX. The real time clock is used for the Logic Calendar and Logic Timed Delay objects. The real time clock is also displayed on models with a front panel LCD.

There are two ways to set the real time clock in a Soundweb London device:

- Go online to the devices with Audio Architect or London Architect. The action of going online will set the GMT time of the real time clock in the device according to the GMT time of the computer.
- Set the GMT time with a third party control message. This is described in the Anytime Help Center article:

[Setting the time in BSS Soundweb London device using third party control message](#)

About HARMAN Professional Solutions

HARMAN Professional Solutions is the world's largest professional audio, video, lighting, and control products and systems company.
