

How to Check the Health of Your Lithium Battery?

Maintaining the health of your speaker's lithium battery is crucial for optimal performance and longevity.

Here are several ways to assess its current condition:

A) Observe Runtime Performance: Look for reduced playback time or inconsistent power (ex. unexpected shutdowns) as primary signs of battery degradation.

B) Monitor Charging Behavior: Watch out for abnormally fast charging followed by quick depletion, the battery failing to hold any charge, or excessive heat during charging, which indicates serious issues.

C) Perform a Visual Inspection (If Applies): Check for any swelling or bulging of the battery case, or leakage (ex. discoloration, residue, or odor), which are critical safety hazards.

Note: You can use a **3rd-Party Lithium Battery Checker**. For removable batteries, an external checker can provide precise individual cell voltages. Significant discrepancies or consistently low readings indicate a failing or unbalanced battery.

If you observe any of these symptoms, especially swelling, leakage, or excessive heat, please discontinue use of the speaker immediately and contact our Technical Support team for further assistance, and/or your local certified [Service Center](#).

About HARMAN Professional Solutions

HARMAN Professional Solutions is the world's largest professional audio, video, lighting, and control products and systems company. Our brands comprise AKG Acoustics®, AMX®, BSS Audio®, Crown International®, dbx Professional®, JBL Professional®, Lexicon Pro®, Martin®, and Soundcraft®. These best-in-class products are designed, manufactured and delivered to a variety of customers in markets including tour, cinema and retail as well as corporate, government, education, large venue and hospitality. For scalable, high-impact communication and entertainment systems, HARMAN Professional Solutions is your single point of contact. www.harman.com
