

When an IP_CLIENT_OPEN is attempted and an ONERROR is returned, a numeric error value is returned.

This will show as Device.Number in the ONERROR event. The 822-DLI-IP Error Reporting.zip example shows an IP_CLIENT_OPEN with a function that will print the errors to the debug port as SEND_STRING 0s. Enable Internal Diagnostics or enable MSG ON in terminal or telnet to see the messages.

About HARMAN Professional Solutions
