Netlinx Studio 3

See the download section for NetLinx Studio version 3.5.960.

This is the newest version of Netlinx Studio 3 that allowed transferring and receiving from Axcess masters.

Note: NetLinx Studio v4.x has discontinued support for Axcent Masters along with .KPD, .TPD, and .TOK file transfers. NetLinx Studio v4.x workspace files (.APW) will NOT attempt to keep these items within the workspace file. You will receive a warning about sections of code are being removed, and you will have the option of canceling when you attempt to open a v3.x workspace file. It is recommended that you "Save As Workspace…" when you load a v3.x workspace file to preserve a copy in the event of any problems.

The following v3 features are no longer supported in NetLinx Studio v4.x:

- File Transfers for G3 Panels (TPD files).

- File Transfers for Mio Keypads (KPD Files).

- File Transfers to Axcent Masters (TOK Files).

- The Axcess Compiler is not installed.
